

Construction and execution

Our frame resistors consist of galvanised aluminium carrier with ceramic slides and a winding made of resistive wire. The resistors are available in packages of 2 to 6 units. On request with protective case IP20 or IP23, thermo-contact and additional tabs.

Features

- Nominal power range: 600 W up to 24 kW
- Standard tolerance: $\pm 10\%$ (tighter tolerances on request)
- Suitable for a forced cooled

Application fields

- Braking resistors
- Starting and regulating resistors
- Basic resistor for forced cooling high-performance resistor loads
